

Tools

#Tools

Yes, tooling does not get the job done, but it will get it done **efficiently**. From the code editor of choice to bundling engine, the right choice will always save you few hours and make you a better engineer.

Let's explore some of the tools!

Code Editors

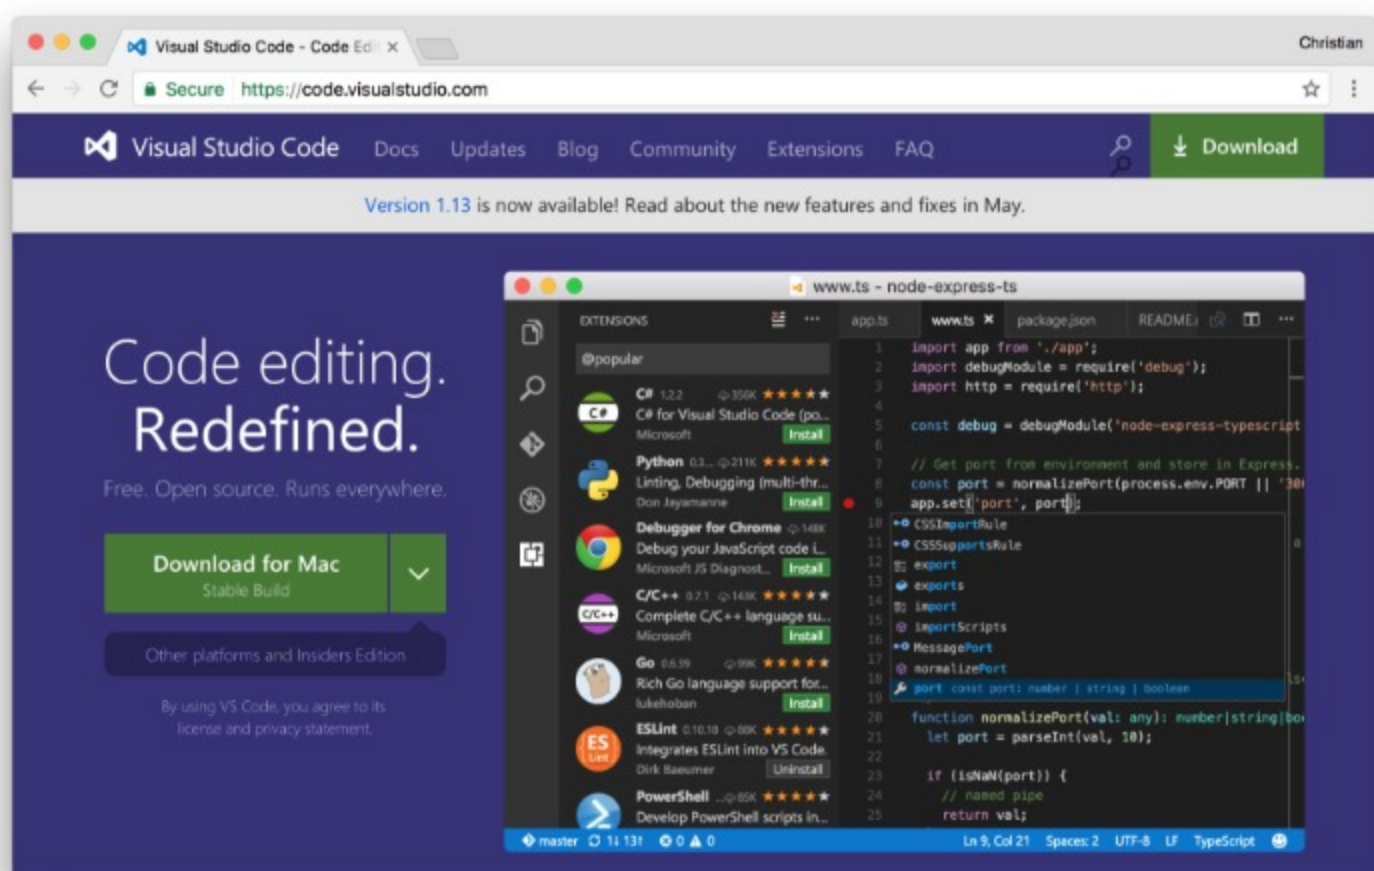

- [VS Code](#)
- [Atom](#)
- [WebStorm](#)
- [Sublime Text](#)
- [Brackets](#)

Preferred

[VS Code](#) has excellent support for Vue. An interesting feature is that it supports Vue natively. So there is no need to use a plugin for [.Vue](#) extension syntax highlighting. [Webstorm](#) is as nice as [VS Code](#) but it's not a free tool.

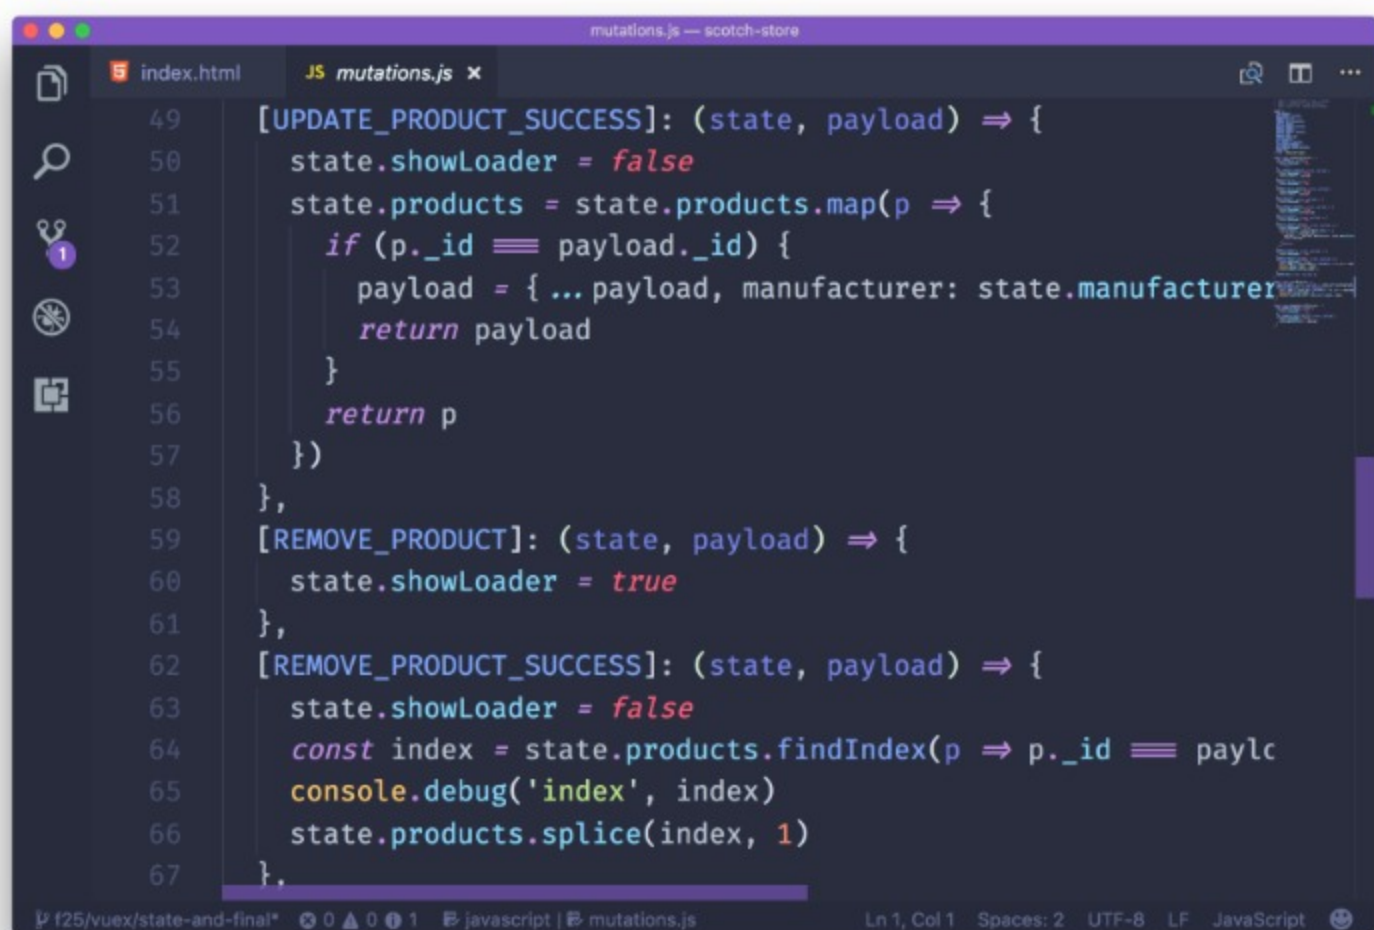

Table of Contents

1 Tools

There is a [comprehensive course](#) on [Scotch](#) that helps with everything you need to know about Vs Code.

TIP: If you'd love to use a nerdy font in your editor and cannot afford [Operator](#), you could use [Fira](#) which has awesome ligatures:

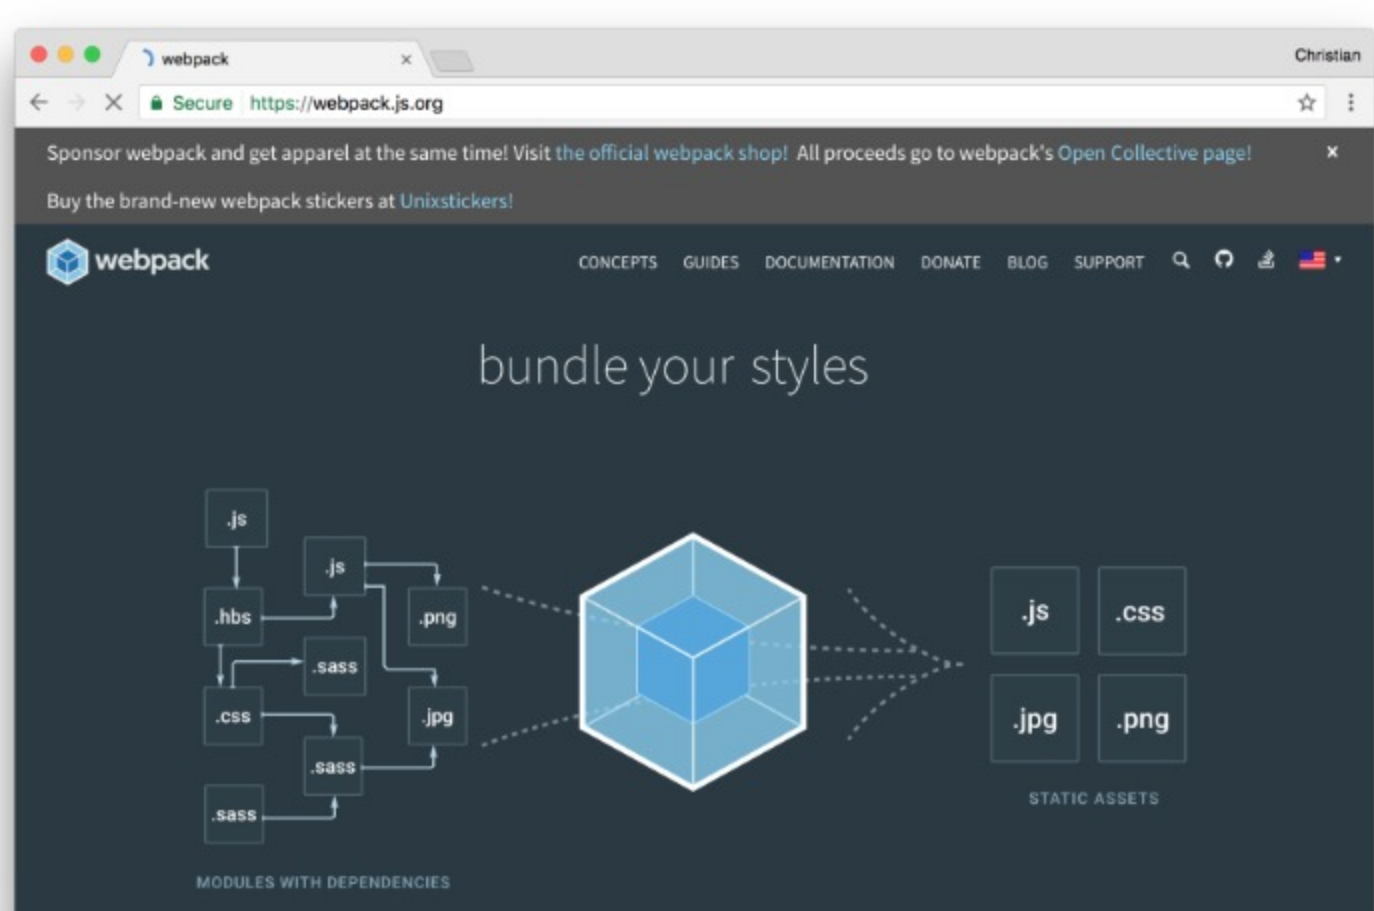

Sublime is also very popular and if you choose to use it, you can [get started here](#)

CLI Tool

Vue provides a CLI tool known as [Vue-CLI](#). Rather than manually create starter folders and setup configurations, you can employ the Vue CLI tool which enables you to create Vue projects using [different templates](#) by executing CLI commands.

webpack

[\[webpack\]\(\)](#) is a code bundling tool that allows you to write organize assets (HTML, CSS, JS, Images) the way you prefer but bundles them into a single/multiple minified file(s). This improves performance because the files served to the browser are minified and improved.

webpack automates this bundling process. Therefore, with your configuration done right (which the helpful Vue CLI does for you), **you don't have to worry about the bundling process**.

ESLint

JavaScript is a loosely typed language. This means a lot of syntaxes you expect to throw errors might be valid. The bad part is, some of those syntaxes might come back to bite you if not careful. A lint tool helps you abide by best practices by throwing errors when your code doesn't follow a set of rules.

ESLint is a lint tool that lints JavaScript code including ES2015.

More Tools

We just discussed the obvious tools that we will encounter while getting started. Along the line building our example app, we might encounter more. When we do, we will discuss what they are before using them.

Getting Started

- 1 Introduction [Free](#)
- 2 Tools [Free](#)
- 3 Our Task [Free](#)
- 4 Hello World [Free](#)

Vue Basics

- 5 Vue CLI [Free](#)
- 6 Components and the Vue Instance [Free](#)
- 7 Template Syntax [Free](#)
- 8 Conditional & List Rendering [Free](#)
- 9 Styles & Classes [Free](#)

Routing

- 10 Single Page Apps [Free](#)
- 11 Creating Routes [Free](#)
- 12 Route Outlets & Links [Free](#)
- 13 Nested & Dynamic Routes [Free](#)

Forms

- 14 Two Way Binding (Reactivity) [Free](#)
- 15 Form Validation [Free](#)
- 16 Handling Form Submissions [Free](#)

API Backend

- 17 Prelude [Free](#)
- 18 Setup [Free](#)
- 19 Provisioning a MongoDB Database [Free](#)
- 20 Enabling CORS [Free](#)
- 21 Schemas & Models [Free](#)
- 22 Routes and Controllers [Free](#)
- 23 Testing with POSTman [Free](#)

Vuex

- 24 The Current Problem [Free](#)
- 25 State Management [Free](#)
- 26 Getters [Free](#)
- 27 Mutations [Free](#)
- 28 Actions [Free](#)

Using Store In Components

- 29 State and Actions on Components [Free](#)
- 30 LAB: Product List [Free](#)
- 31 LAB: Product Details [Free](#)
- 32 LAB: Admin Features [Free](#)
- 33 LAB: Spinner, Cart & Store Subscription [Free](#)
