## State and Actions on Components

NEXT: LAB: PRODUCT LIST

F

or a while we have not been creating components for the different features in our app. Currently, we just have our routes setup and few form pages for the admin. The app still needs:

- 1. A list of products (Home page)
- 2. Product details (Details Page)
- 3. Cart (Cart Page) + Cart count
- 4. A table of products (Admin)
- 5. An edit form
- 6. A loading spinner

We need individual/composed components to add the remaining features. Good news is, we already have the state ready. Therefore, we just retrieve state with setters and update state with actions and mutations.

1       Introduction       Free         2       Tools       Free         3       Our Task       Free         4       Hello World       Free         5       Vue CLI       Free         6       Components and the Vue Instance Free       Free         7       Template Syntax       Free         8       Conditional & List Rendering       Free         8       Conditional & List Rendering       Free         10       Styles & Classes       Free         11       Creating Routes       Free         12       Route Outlets & Links       Free         13       Nested & Dynamic Routes       Free         14       Two Way Binding (Reactivity)       Free         15       Form Validation       Free         16       Handling Form Submissions       Free         17       Prelude       Free         18       Setup       Free         19       Provisioning a MongoDB Database Free         20       Routes and Controllers       Free         21       Schemas & Models       Free         22       Routes and Controllers       Free         23       Testing with POSTm	Getting Started
